Dear Mr. Scott Bartkowski, President

You may recall that I was the Project Manager of Project GreenShores before retiring after thirty years with the Florida Department of Environmental Protection. Following retirement and to make the best use of my expertise and experience, I started an Environmental Consulting and Coastal Engineering Firm located in Pensacola, Florida.

Over the past several months, one of the many projects my firm has been involved in has been evaluating and monitoring the effectiveness of the Coastal Haven Breakwaters that your firm designed and placed on the eastern edge of the project area. As you know, the purpose of which was to reduce the severe erosion occurring on the beach area, planted with a variety of plants.

The breakwaters your firm designed for this project are proving extremely effective in halting the severe erosion to this project area. Data collected prior to and after placement of your units effectively shows that zero erosion occurred following the placement of the breakwaters and that there was no "settling-in" period. I have enclosed some dramatic photographs that graphically depict how effective the breakwaters are in disrupting wave activity and attenuating wave energy.

Additionally, we have been monitoring marine biomass development and species diversity around your breakwater structures. Due to the hydrodynamic design of the openings in the sides and top of the units, not only do they serve to dissipate energy, but they very effectively oxygenate the water around the breakwaters. This oxygen rich environment greatly assists in the marine biomass development and is more noticeable in the shorter period of time the units have been in place when compared to the piles of limestone boulders the project initially used.

We will continue to independently monitor the project area, as we have been retained by a separate party, and periodically provide you with updates that we may think will be of interest to you. Your technology is very intriguing and a pleasure to observe in action. Enjoy the pictures and please feel free to contact me personally at any time.

Best Regards

Sava Varazo
President
